MUSASHI ENGINEERING,INC.

Desk-top dispensing robot with PC control image recognition

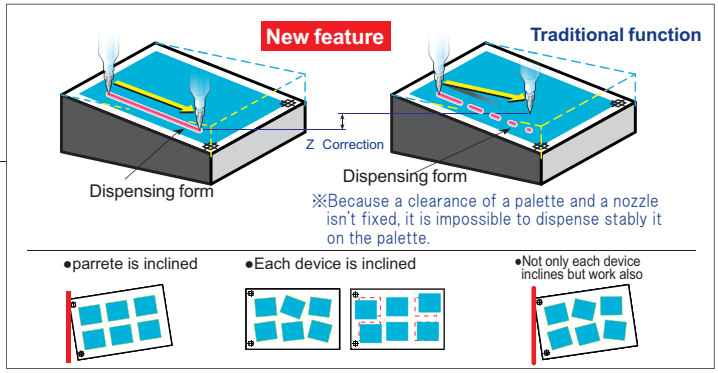
IMAGE MASTER® 350PC

Equipped with the palette/device alignment function.

The dispense robot for cell production is developed dramatically

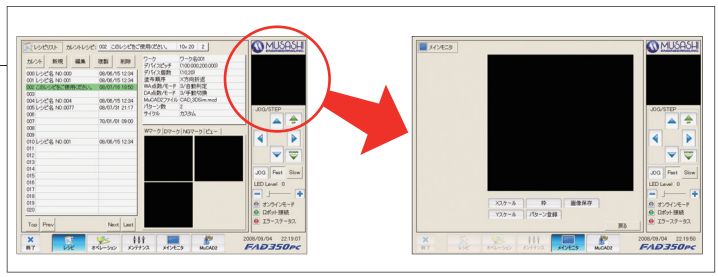
Newly developed 3D alignment function

・Thanks to 3D alignment function,XYθ palette and work according to the slope of the correction and, according to Z corresponds to swell compensation.



Useful function,camera and monitor

・The image of the camera is always displayed on a large screen.A convenient function of dispensing check ,dispensing size measurement by picture processing and complete camera teaching etc. are installed abundantly.



The dispensing image is displayed

・The completion drawing and the dispensing stroke width are confirmed by the device view.
・A patternview confirms each dispensing pattern and dispensing width. Also it prevents a program miss.
